

SCHROTH LATCH LINK STYLE HARNESSSES

HOW TO USE THE LATCH MECHANISM

SCHROTH's Latch Link style harnesses use a very simple and standard central latching mechanism to fix all points of the restraint together.

- 1.** The harness is shown with no points latched

- 2.** Slide the Left Hand shoulder belt over the male part of the Lap Buckle

- 3.** Slide the Anti-sub Strap Buckle over the male part of the Lap buckle.

- 4.** Do the same for the Right Hand Shoulder

- 5.** Keeping the lever open, slide the Right hand lap latch over the tip of the male latch.

- 6.** Close the lever on the Right hand lap to lock around the hole in the tip of the male latch
